

TPS REPORT 08

Factorial ANOVA

1. For your TPS Report this week, you'll be working from the Haters text and questions again. Specifically, you'll need to answer the following questions from Haters in your Report:
 - Chapter 14 - #1, #3, #4

You should plan on using Excel every chance you get to crunch numbers. When instructed to calculate "by hand", go ahead and use Excel and your knowledge of primitives. HOWEVER, you should be **very** careful using new primitives in Excel unless you are absolutely certain that those primitives are providing the *exact* information you are trying to derive.

You may need to check Table B.3 again from HATERS for the *F*-Test.
